

Stadia Strip™ Anti Slip Inserts

GripDeck - The **one thing** you will want to get under your feet

Simple anti slip solution for stadiums

Stadia Strips™ can be used in decking or concrete based buildings such as sports stadiums.

Our strips are designed to fit into a 6 mm deep rebate in concrete or timber, with the aggregate sitting slightly proud. For large scale projects we can offer custom made strips to suit any non standard requirements.

See overleaf and online for more information.

Stadia Strip™ - Specification

GD-S12

GD-S23

Type	Width	Finished depth	Weight
GDS12	12mm	7.27 - 8mm	0.18kg/m
GDS23	23mm	7.27 - 8mm	0.35kg/m

Aluminium base:	Alloy extrusion 6063 T6 to BS EN573 & BS EN755
Resins:	Solvent and diluent free epoxy with silica fillers
Aggregate Type:	RASC Guyanan Bauxite or Dynagrip
Colour:	Standard Grey or Black (others available on request)
Minimum Particle size:	0.5mm

AntiSlip Testing / Skid Resistance Values

Tested to:	BS 7976-2:2002 as advised by UK Slip Resistance Group
Value:	Averaged 76 in the wet
Potential for Slip Category:	Extremely Low

Cutting: Strips should be cut with an angle grinder, using a metal cutting disc or diamond blade. We recommend the following PPE: Gloves, goggles, dust mask and ear defenders.

Warning - sparks and heat may be generated during the grinding/cutting process, so ensure this process is carried out in a safe area away from flammable materials. Allow the ends to cool.

Fitting: Strips should be fitted into a 6 mm deep rebate, allowing the anti-slip aggregate to sit slightly proud of the surrounding surface. Bed the strips on an external grade gun applied adhesive, ensuring that a bead is applied along the entire length of the strips. Secure strips with 3mm dia x 20mm long stainless steel screws at 250 - 300mm centers. Strips should be fixed at a maximum of 25mm from the ends. Predrilling the strips may be necessary depending on the fixing type.
